

Your contribution is needed: A Communal Geodatabase - Marion Island

PROBLEM STATEMENT

Marine and terrestrial research is a major focus of South African active region Marion Island, yet there is a shortage of spatial data available for scientists and the existing data, both dated and recent does not yet form part of a centralised database that is available to researchers and managers on the Island.

PROJECT AIM

The aim of this project is to consolidate the existing spatial data into a centralised geodatabase that can be made available to researchers conducting studies on Marion Island, as well as to establish the future spatial data needs for the Island.

WHAT I NEED FROM YOU?

- . **Surveys**
 - . Please will you be so kind as to fill out a questionnaire and place it in the box provided.
- . **Whiteboard**
 - . Please supply any information you would recommend:
 - . Suggestions
 - . Comments
 - . Contacts etc.

THE OUTCOME?

- . A communal database with following contents:
 - . Index.
 - . Updated high resolution satellite base map.
 - . Collection of spatial data layers (.shp and .gdb).
 - . Selection of thematic maps of Marion Island.
 - . Metadata.
- . This will be provided on a compact disk.
